Paediatric First Aid

Course Description

First aid covers a multitude of skill sets and responses to many medical situations. Its primary aim is to provide immediate first aid medical care and treatment until professional medical assistance arrives.

The aim of this course is to equip you with the theoretical knowledge, skills and confidence needed to deal with paediatric first aid situations, covering key topics including emergency planning, assessing a situation, Basic Life Support, CPR, Shock, Fractures, Bleeds and a range of other minor illnesses and injuries.

Please note theory only knowledge is not a substitute for a classroom-based face-to-face regulated paediatric training. Practical competence is a requirement to complete a regulated first aid qualification.

Target Audience

Ideal as CPD (Continued Professional Development) training for qualified paediatric first aiders in a nursery, school, pre-school environments, childcarers and parents.

Advantages

First aid training provides confidence and the knowledge to deal with an emergency situation effectively. The online format allows you to progress through the modules to absorb the information at convenience and at your own pace.

Further Progression

We offer an extensive portfolio of courses in our health and social care suite that is a great addition to this course. Anyone starting in the early year's sector would benefit from our CPD accredited [Introduction to the Early Years Foundation Stage](#) and [Safeguarding Children](#) courses.

Other complementary courses include [Epilepsy Awareness](#), [Diabetes Awareness](#), [Positive Handling in Schools](#) for a detailed insight.
